**Patrick C. McGuire** received the B.A. degree (with honors) in physics and mathematics from the University of Chicago, Chicago, IL, and the Ph.D. degree in physics from the University of Arizona, Tucson, AZ.

He is currently with the McDonnell Center for the Space Sciences, Washington University, St. Louis, MO. Prior to working on the CRISM project, he worked in the fields of computer vision, robotics, neural networks, and astrobiology in Bielefeld, Germany, and in Madrid, Spain. His current research interests include computer vision, ice spectroscopy,

and martian polar processes.

**Michael J. Wolff** received the B.S. degree (*summa cum laude*) in physics and mathematics from Marquette University, Milwaukee, WI, and the Ph.D. degree (*magna cum laude*) in astronomy from the University of Wisconsin, Madison.

He is currently with the Space Science Institute, Boulder, CO. His current research interests include radiative transfer and studies of aerosols in the martian atmosphere.

**Michael D. Smith** received the B.S. degree in physics from the California Institute of Technology, Pasadena, and the M.S. and Ph.D. degrees in astronomy from Cornell University, Ithaca, NY.

He is currently with the NASA Goddard Space Flight Center, Greenbelt, MD. His research interests include the meteorology and dynamics of planetary atmospheres, radiative transfer, and remote sensing techniques.

**Raymond E. Arvidson** received the A.B. degree from Temple University, Philadelphia, PA, and the A.M. and Ph.D. degrees from Brown University, Providence, RI.

He is currently a Professor of earth and planetary sciences and a researcher focused on the remote sensing of planetary surfaces with the McDonnell Center for the Space Sciences, Washington University, St. Louis, MO.

**Scott L. Murchie** received the B.A. degree from Colby College, Waterville, ME, the M.S. degree from the University of Minnesota, Minneapolis, and the Ph.D. degree from Brown University, Providence, RI.

He is a Planetary Scientist with the Applied Physics Laboratory, Johns Hopkins University, Laurel, MD, whose fields of interest include the evolution of the martian surface, environments of past martian water, stratigraphy of terrestrial planets, crustal materials, as well as studies of asteroids and

small satellites.

**R. Todd Clancy** received the B.A. degree in geology from the University of North Carolina, Chapel Hill, the M.S. degree in geophysics from Cornell University, Ithaca, NY, and the Ph.D. degree in planetary science from the California Institute of Technology, Pasadena.

He is currently with the Space Science Institute, Boulder, CO. His research interests include ground-based spectroscopy of planetary atmospheres, photochemistry of the terrestrial atmospheres, and aerosol remote sensing.

**Ted L. Roush** received the B.S. degree in geology from the University of Washington, Seattle, and the M.S. and Ph.D. degrees in geology and geophysics from the University of Hawaii, Honolulu.

He is currently with the NASA Ames Research Center, Moffett Field, CA. His research interests include using spacecraft and telescopic observations, laboratory simulations, and theoretical calculations to provide quantitative compositional interpretation of diverse bodies from Mercury to Pluto.

**Selby C. Cull** received the B.A. degree in geology from Hampshire College, Amherst, MA, and the M.S. degree in science writing from the Massachusetts Institute of Technology, Cambridge. She is currently working toward the Ph.D. degree at Washington University, St. Louis, MO.
