

Discussion questions

- How do you think these domes formed?
- What is the relationship between the silicic volcanism at Compton-Belkovitch and Gruithuisen and Mairan domes? Did they form through similar processes? How would that work with the different crustal thicknesses in the two regions?
- What implications do these units have for the evolution and history of volcanism on the moon?
- Why was the period of silicic volcanism so short? Why did it stop?
