

2.10	Critical grain size for convection in Ganymede	70
2.11	Critical ice shell thickness for convection in Europa	72
2.12	Critical grain size for convection in Europa	74
3.1	Deformation maps for ice I	83
3.2	Composite viscosity of ice I as a function of stress	85
3.3	Determination of Ra_{cr} for convection in ice I with $d = 3.0$ cm	91
3.4	Temperature and viscosity fields for convection in ice I with composite rheology and $d = 3.0$ cm	92
3.5	Example of determination of λ_{cr} for ice with composite rheology	94
3.6	Variation of Ra_{cr} with perturbation amplitude	95
3.7	Variation in $Ra_{cr,0}$ as a function of grain size	96
3.8	Activation of non-Newtonian creep mechanisms in ice with $0.1 \text{ mm} < d <$ 1.0 cm	97
3.9	Activation of non-Newtonian creep mechanisms in ice with $1.0 \text{ cm} < d <$ 3.0 cm	99
3.10	Critical shell thickness for convection in Newtonian and non-Newtonian ice I: Europa	102
3.11	Critical shell thickness for convection in Newtonian and non-Newtonian ice I: Ganymede	104
3.12	Critical shell thickness for convection in Newtonian and non-Newtonian ice I: Callisto	105
4.1	Convective parameter space explored	116
4.2	Variation in convective and conductive heat flux with ice shell thickness and grain size	121
5.1	Geophysical processes relevant to astrobiology in the Galilean satellites .	132
