

5.3	A user-thread graph with red vertices (circles) denoting unimportant threads and blue vertices (squares) denoting important threads. For this instance with budget $B = 2$ , <b>Greedy</b> will pick $x$ and obtain a reward of 1, whereas the optimal solution consists of $\{y_1, y_2, \dots, y_K\}$ for a reward of $K$ . . . .	159
5.4	Plots showing the reward of solutions produced by <b>GreedyRatio</b> and <b>GreedyReward</b> with $thresh = 80$ and (a) $m = 2$ and (b) $m = 3$ . The $x$ -axis shows the budget and the $y$ -axis shows reward. The black line shows the reward from <b>GreedyRatio</b> and the dashed line shows the reward from <b>GreedyReward</b> . The dotted lines mark points of interest, corresponding to 50%, 75%, and 100% coverage of important threads, discussed further in Table 5.2. . . . .	170
5.5	Map of selected users for full coverage at $thresh = 80$ and $m = 3$ . . . . .	172
5.6	Plots of per-day post traffic on the EIN, averaged over seven days, in 2007. Results are from running <b>Greedy</b> with $thresh = 80$ , full coverage, and (a) $m = 2$ and (b) $m = 3$ . Gray levels show the total number of posts to the EIN. Black levels indicate the number of posts to marked threads only. 174	174
5.7	Plots comparing the performance of <b>Greedy</b> with an upperbound obtained by solving the LP relaxation of BMOC for $thresh = 70$ with (a) $m = 2$ and (b) $m = 3$ . The $x$ -axis is the budget and the $y$ -axis is the reward. The black line shows the reward produced by the <b>Greedy</b> and the shaded line shows the upper bound obtained using the LP. . . . .	177
5.8	Plots showing the (small) improvement obtained by enhancing <b>Greedy</b> with “look-ahead;” all subsets of size at most 2 are considered as candidates in each iteration. Here $thresh = 80$ and $m = 2$ . The $x$ -axis is the budget and the $y$ -axis is the reward. The black line shows the reward produced by <b>Greedy</b> without “look-ahead” and the dashed line shows the improvement due to “look-ahead.” (a) shows the full plot and (b) shows the zoomed portion given by the box in (a). . . . .	179
