

**A****B**

**Fig. S6.** Synteny proxies per classes of gene origin in Thaumarchaeota (Thaum) and GII/III-Euryarchaeota (Eury) genomes. **A**, mean synteny block length per block origin. **B**, cluster of synteny blocks as a function of block bounds. A block is defined as an array of contiguous genes from same origin (class). 'Others' includes orphans plus non-HGT shell genes.
