

Figure 10. (Top) Time series of wind stress data based on Arabian Sea central mooring meteorological data indicating northeast and southwest monsoonal condition. (Bottom) Time-depth contour data showing chlorophyll data collected from MVMSS. Also overlain are mixed layer depths based on 0.1 and 1.0 $^{\circ}\text{C}$ temperature criteria. Designations EB1 indicate eddy bloom 1 and 2, respectively, and NEB and SWB indicate northeast monsoon and southwest monsoon blooms, respectively.
