

Fig. 8. Progressive vector diagrams (time-integrated velocity) from the current meters on WHOI. All are given a common start, and the first days of each month, starting with November 1994, are marked.

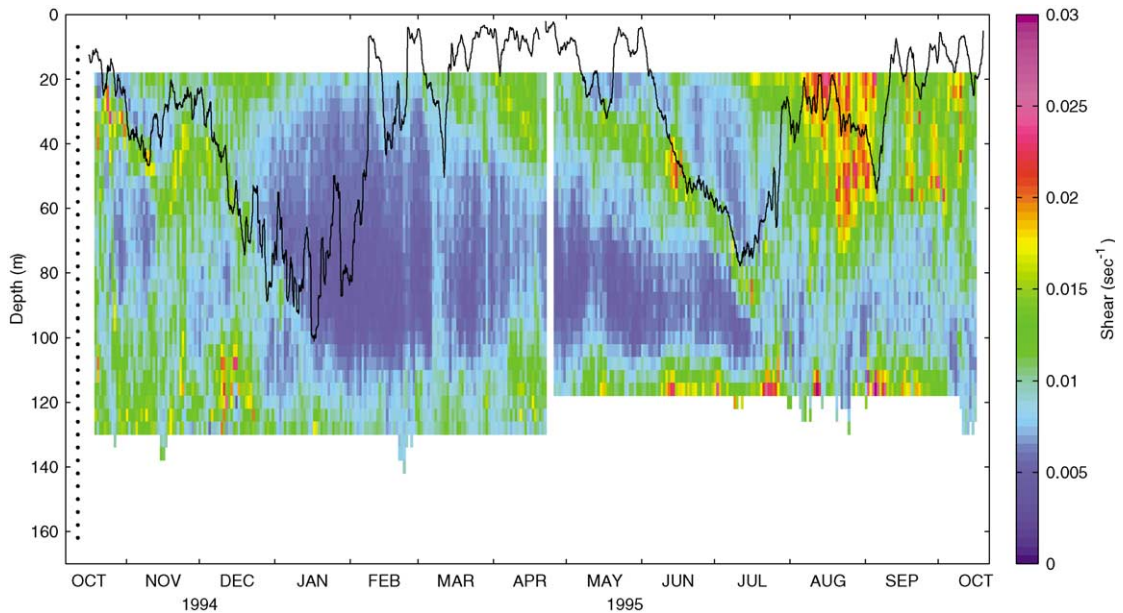

Fig. 9. The daily average vertical shear of the horizontal velocity, as measured by the ADCP on SIO-S. Black dots at left indicate the depths of the measurement bins. The daily mean mixed layer depth from WHOI is superimposed.
